2 Introduction

The following report summarizes the monthly background data generated by the event sampling systems as part of the Richmond Community Air Monitoring Program (RCAMP). RCAMP is an independent initiative designed to provide air quality data to the general public, and to educate the community about what is in the air. The air quality monitoring equipment (including installation) was funded by Chevron in consultation with the City of Richmond. Ongoing operation, maintenance, and data reporting is managed by Argos Scientific, Inc., with direction from the City Manager's Office, and input from Chevron and community representatives.

In addition to real-time monitoring, each community location is equipped discrete air monitoring equipment, which is designed to activate on a schedule or when manually triggered. The discrete monitoring is used to collect background data. It will then be activated monthly for QA/QC purposes and also activated during an event. The data collected for this report is for background purposes.

This report details the information collected by the Volatile Organic Compound (VOC), Poly Aromatic Hydrocarbon (PAH), and the Metals sampling systems installed at the community air monitoring stations near the perimeter of Chevron's Richmond Refinery. Samples were collected from July 15, 2014 at 02:00 PM to July 16, 2014 at 02:00 PM. The remainder of the report provides a summary of the average wind direction patterns during the sample collection period, and the results of the Quality Assurance/Quality Control (QA/QC) checks. Appendix A lists the California and Federal Health limits published for substances relevant to the RCAMP.

3 Results

3.1 VOC Sample Results

This section of the report presents the results for VOC samples collected.

Table 3.1: VOC Sample Results 07/15/2014 at Atchison Village, Point Richmond and North Richmond

Compound	Atchison Village (ppb)	Point Richmond (ppb)	North Richmond (ppb)
1,3-Butadiene	Nothing Detected	Nothing Detected	Nothing Detected
Benzene	Nothing Detected	Nothing Detected	Nothing Detected
Carbon Tetrachloride	Nothing Detected	Nothing Detected	Nothing Detected
Dichloromethane	21	17	Nothing Detected
Ethyl Benzene	Nothing Detected	Nothing Detected	Nothing Detected
m,p-Xylene	1.4	Nothing Detected	Nothing Detected
o-Xylene	Nothing Detected	Nothing Detected	Nothing Detected
Tetrachloroethylene	Nothing Detected	Nothing Detected	Nothing Detected
Toluene	1.5	Nothing Detected	Nothing Detected
Vinyl Chloride	Nothing Detected	Nothing Detected	Nothing Detected

3.2 PAH Sample Results

This section of the report presents the results for PAH samples collected.

Sources for Health Limits

California health standards were obtained from the California Office of Environmental Health Hazard Assessment. This organization is responsible for conducting health risk assessments of chemical contaminants found in air. This includes studying the health impacts on sensitive subpopulations such as children and the elderly.

Federal health standards were obtained from the Environmental Protection Agency (EPA). The EPA publishes regulations and sets air quality standards for the nation.

General Health Limits for Metals :

Copper, Lead, and Manganese all have published health limits. However, in general, the EPA sets health limits for metals and other elements based on an estimate that they should not exceed 10% of the particulates in an ambient air

sample. Since the EPA's annual limit for Particulate Matter (PM) smaller than 10 microns should not exceed $50 \mu\text{g}/\text{m}^3$, the annual exposure to these elements should not exceed $5 \mu\text{g}/\text{m}^3$.
