# Executive Summary

---

The following report summarizes the monthly data generated as part of the Richmond Community Air Monitoring Program (RCAMP). RCAMP is an independent initiative designed to provide air quality readings to the general public and educate the community about what is in the air. The air quality monitoring equipment and its installation was funded by Chevron in consultation with the City of Richmond. Ongoing operation, maintenance and data reporting is managed by Argos Scientific, Inc., with direction from the City Manager's Office, and input from Chevron and community representatives.

This report details the information collected by the operation of the open path fence line monitoring systems installed near the perimeter of Chevron's Richmond Refinery. The report explains the data and measurements of target compounds (benzene, toluene, sulfur dioxide, p-xylene, carbon disulfide and hydrogen sulfide) for the month of August 2014, at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

## **Operational Performance Events**

During August 2014 there were no events that affected the monitoring system on the refinery perimeter.

## **Maintenance Activities**

Routine maintenance and quality assurance/quality control (QA/QC) for the open path fence line monitoring systems occurred on August 11 and August 21 at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

## Summary Findings

The following was noted from the monthly results of the monitoring activities:

- At the refinery perimeter that is adjacent to Point Richmond, the maximum toluene value was recorded when winds were from the Southeast;
- At the refinery perimeter that is adjacent to Atchison Village, the maximum benzene value was recorded when winds were from the South-to-southeast. The maximum sulfur dioxide value was recorded when winds were from the South. The maximum toluene value was recorded when winds were from the South-to-southeast. The maximum p-xylene value was recorded when winds were from the South-to-southeast;
- At the refinery perimeter that is adjacent to North Richmond, the maximum sulfur dioxide value was recorded when winds were from the South-to-southwest.

The following operational issues were noted on the Richmond Refinery Community Website:

- 08/12/2014 15:40 - This afternoon, around 12:45 pm, there were data spikes on the Atchison Village community monitoring system for m-Xylene, o-Xylene, and Ethyl-benzene. These spikes were caused by an ongoing painting operation next to the community station.
