Executive Summary

The following report summarizes the monthly data generated as part of the Richmond Community Air Monitoring Program (RCAMP). RCAMP is an independent initiative designed to provide air quality readings to the general public and educate the community about what is in the air. The air quality monitoring equipment and its installation was funded by Chevron in consultation with the City of Richmond. Ongoing operation, maintenance and data reporting is managed by Argos Scientific, Inc., with direction from the City Manager's Office, and input from Chevron and community representatives.

This report details the information collected by the operation of the open path fence line monitoring systems installed near the perimeter of Chevron's Richmond Refinery. The report explains the data and measurements of target compounds (benzene, toluene, sulfur dioxide, p-xylene, carbon disulfide and hydrogen sulfide) for the month of January 2015, at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

Operational Performance Events

During January 2015 there were no events that affected the monitoring system on the refinery perimeter.

Maintenance Activities

Routine maintenance and quality assurance/quality control (QA/QC) for the open path fence line monitoring systems occurred on January 5, 2015 at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

Summary Findings

The maximum toluene value was recorded when winds were from the South-to-southwest. The maximum p-xylene value was recorded when winds were from the North-to-northeast;
- At the refinery perimeter that is adjacent to Atchison Village, the maximum sulfur dioxide value was recorded when winds were from the North-to-northeast. The maximum toluene value was recorded when winds were from the North-to-northwest. The maximum p-xylene value was recorded when winds were from the North;
- At the refinery perimeter that is adjacent to North Richmond, the maximum sulfur dioxide value was recorded when winds were from the South. The maximum toluene value was recorded when winds were from the North-to-northwest. The maximum p-xylene value was recorded when winds were from the Northwest.
