Executive Summary

The following report summarizes the monthly data generated as part of the Richmond Community Air Monitoring Program (RCAMP). RCAMP is an independent initiative designed to provide air quality readings to the general public and educate the community about what is in the air. The air quality monitoring equipment and its installation was funded by Chevron in consultation with the City of Richmond. Ongoing operation, maintenance and data reporting is managed by Argos Scientific, Inc., with direction from the City Manager's Office, and input from Chevron and community representatives.

This report details the information collected by the operation of the open path fence line monitoring systems installed near the perimeter of Chevron's Richmond Refinery. The report explains the data and measurements of target compounds (benzene, toluene, sulfur dioxide, p-xylene, carbon disulfide and hydrogen sulfide) for the month of August 2013, at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

Detections Associated with Refinery Operations

During the month of August 2013, there were no detections by the fence line monitoring systems that could be traced to specific refinery operations.

Operational Performance Events

During August 2013 there were no recorded events that affected any of the monitoring systems on the refinery perimeter.

Maintenance Activities

Routine maintenance and quality assurance/quality control (QA/QC) for the open path fence line monitoring systems occurred on August 2, 2013.

Summary Findings

The following was noted from the monthly results of the monitoring activities:

- At the refinery perimeter that is adjacent to Point Richmond, the maximum sulfur dioxide concentration was recorded when the winds were from the South-to-southeast. The maximum toluene value was recorded when winds were from the South-to-southeast;
- At the refinery perimeter that is adjacent to Atchison Village, the maximum benzene concentration was recorded when the winds were from the South-to-southeast. The maximum p-xylene value was recorded when winds were from the South-to-southeast;

- At the refinery perimeter that is adjacent to North Richmond, the maximum sulfur dioxide concentration was recorded when the winds were from the South-to-southwest. The maximum toluene value was recorded when winds were from the Northwest. The maximum p-xylene value was recorded when winds were from the South-to-southeast.
