# Executive Summary

---

The following report summarizes the monthly data generated as part of the Richmond Community Air Monitoring Program (RCAMP). RCAMP is an independent initiative designed to provide air quality readings to the general public and educate the community about what is in the air. The air quality monitoring equipment and its installation was funded by Chevron in consultation with the City of Richmond. Ongoing operation, maintenance and data reporting is managed by Argos Scientific, Inc., with direction from the City Manager's Office, and input from Chevron and community representatives.

This report details the information collected by the operation of the open path fence line monitoring systems installed near the perimeter of Chevron's Richmond Refinery. The report explains the data and measurements of target compounds (benzene, toluene, sulfur dioxide, p-xylene, carbon disulfide and hydrogen sulfide) for the month of November 2013, at the fence line monitoring locations located near the Richmond Refinery perimeter, adjacent to Point Richmond, Atchison Village and North Richmond.

## **Operational Performance Events**

During November 2013 there was one event that affected the monitoring system on the refinery perimeter that is adjacent to North Richmond. On November 29, 2013 the data acquisition system froze. An Argos technician was dispatched on December 02, 2013 when access to the site became possible. The system was restored to operational status by servicing and restarting the system.

## **Maintenance Activities**

Routine maintenance and quality assurance/quality control (QA/QC) for the open path fence line monitoring systems occurred on November 04, 2013 and November 18, 2013.

## **Summary Findings**

The following was noted from the monthly results of the monitoring activities:

- At the refinery perimeter that is adjacent to Point Richmond, the maximum sulfur dioxide concentration was recorded when the winds were from the Northeast. The maximum toluene value was recorded when winds were from the Southwest;
- At the refinery perimeter that is adjacent to Atchison Village, the maximum sulfur dioxide concentration was recorded when the winds were from the East-to-southeast. The maximum toluene value was recorded when winds were from the North-to-northwest;
- At the refinery perimeter that is adjacent to North Richmond, the maximum sulfur dioxide concentration was recorded when the winds

were from the East-to-southeast. The maximum toluene value was recorded when winds were from the Southeast.
